

Early detection makes recovery possible

Tuberculosis (TB) can be cured when detected early. With proper treatment, most people can recover and return to normal daily activities.

Take care of your health

Tuberculosis (TB) can affect anyone. Early check-up helps protect your health and the people around you.

If you have symptoms, visit a public health center or clinic.

TuBerculosis treatment

Does not discriminate against anyone

TB is a curable disease

Foreigners staying in Korea are also subject to tuberculosis screening (anyone can test)

Foreign residents can receive TB screening

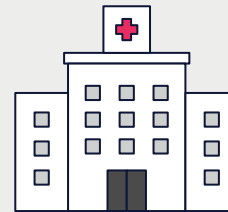

If you live in Korea,
you can get tested for tuberculosis (TB).
TB screening is available
regardless of nationality or visa status.
Anyone can receive testing when needed.

Tuberculosis (TB) is a **treatable disease**.
With early detection and proper treatment,
most people can **recover and return to daily life**.
TB is a medical condition and
should not be a reason for discrimination.

TB testing is available at public health centers

Once a year,
visit a nearby health center for
tuberculosis screening

**If you have these symptoms,
please get a checkup.**

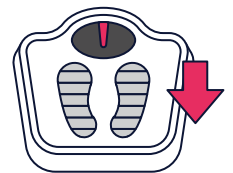

Please consider TB testing
if you have the following symptoms

a cough lasting
more than two weeks

persistent fever

unprovoked
weight loss
